BULLETIN OF THE BUREAU OF EDUCATION FOR 1917.

NOTE.—With the exceptions indicated, the documents named below will be sent free of charge upon application to the Commissioner of Education, Washington, D. C. Those marked with an asterisk (*) are no longer available for free distribution, but may be had of the Superintendent of Documents, Government Printing Office, Washington, D. C., upon payment of the price stated. Remittances should be made in coin, currency, or money order. Stamps are not accepted.

A complete list of publications will be sent upon application.

- *No. 1. Monthly record of current educational publications, January, 1917. 5 cts.
- No. 2. Reorganization of English in secondary schools. J. F. Hosic.
- No. 3. Pine-needle basketry in schools. W. C. A. Hammel.
- No. 4. Secondary agricultural schools in Russia. W. S. Jesien.
- No. 5. Report of an inquiry into the administration and support of the Colorado school system. Katherine M. Cook and A. C. Monahan.
- No. 6. Educative and economic possibilities of school-directed home gardening in Richmond, Ind. J. L. Randall.
- No. 7. Monthly record of current educational publications, February, 1917.
- No. 8. Current practice in city school administration. W. S. Deffenbaugh.
- No. 9. Department-store education. Helen R. Norton.
- No. 10. Development of arithmetic as a school subject. W. S. Monroe.
- No. 11. Higher technical education in foreign countries. A. T. Smith and W. S. Jesien.
- No. 12. Monthly record of current educational publications, March, 1917.
- No. 13. Monthly record of current educational publications, April, 1917.
- No. 14. A graphic survey of book publication, 1890-1916. F. E. Woodward.
- No. 15. Studies in higher education in Ireland and Wales. Geo. E. MacLean.
- No. 16. Studies in higher education in England and Scotland. Geo. E. MacLean.
- No. 17. Accredited higher institutions. S. P. Capen.
- No. 18. History of public school education in Delaware. S. B. Weeks.
- No. 19. Report of a survey of the University of Nevada.
- No. 20. Work of school children during out-of-school hours. C. D. Jarvis.
- No. 21. Monthly record of current educational publications, May, 1917.
- No. 22. Money value of education. A. Caswell Ellis.
- No. 23. Three short courses in home making. Carrie A. Lyford.
- No. 24. Monthly record of current educational publications—Index, February to January, 1917.
- No. 25. Military training of youths of school age in foreign countries. W. S. Jesien.
- No. 26. Garden clubs in the schools of Englewood, N. J. Charles O. Smith.
- No. 27. Training of teachers of mathematics for the secondary schools. R. C. Archibald.
- No. 28. Monthly record of current educational publications, June, 1917.
- No. 29. Practice teaching for teachers in secondary schools.
- No. 30. School extension statistics. Clarence A. Perry.
- No. 31. Rural-teacher preparations in county training schools and high schools. H. W. Foght.
- No. 32. Work of the Bureau of Education for the natives of Alaska, 1915-16.
- No. 33. A comparison of the salaries of rural and urban superintendents of schools. A. C. Monahan and C. H. Dye.
- No. 34. Institutions in the United States giving instruction in agriculture, 1915-16. A. C. Monahan and C. H. Dye.
- No. 35. The township and community high-school movement in Illinois. H. A. Hollister.

INSTITUTIONS IN THE UNITED STATES GIVING INSTRUCTION IN AGRICULTURE, 1915-16.

This bulletin contains lists of institutions, colleges, normal schools, private secondary schools, special agricultural schools, and public high schools giving instruction in agriculture. While every precaution has been taken to make the information complete, it is by no means certain that every institution properly belonging in the lists is included. The lists include all schools that reported to the bureau that they had students actually studying agriculture during the school year 1915-16. Others that reported "courses offered," but no students, are not included. Still others that reported that they were "teaching agriculture" indirectly through "agricultural botany," "agricultural zoology," and "agricultural biology," etc., are not included.

Summary of institutions giving instruction in agriculture in 1915-16.

Names of institutions.	Number of institutions.	Students in agriculture.
I. State agricultural colleges.....	¹ 50	
Students in 4-year college courses.....		16,008
Students in 1 and 2 year college courses.....		10,332
Students in subject-courses of less than 12 weeks.....		14,108
II. State agricultural colleges for negroes.....	17	
Students in 4-year agricultural courses.....		2,053
III. Other universities and colleges.....	² 16	820
IV. Private secondary schools (not special agricultural schools).....	149	2,601
V. Private agricultural secondary schools.....	12	
VI. Secondary and higher schools for negroes.....	107	
VII. Public normal schools.....	³ 124	
VIII. Public institutions for juvenile delinquents.....	38	
IX. Secondary schools of agriculture maintained by the State agricultural colleges at the colleges.....	28	3,958
X. Special agricultural schools receiving State aid.....	74	6,643
XI. Vocational agricultural departments in public high schools under State supervision.....	⁴ 421	
XII. Public high schools.....	2,981	60,925

¹ Not including separate State agricultural colleges for negroes, given in II.

² Not including separate colleges for negroes given in VI.

³ Does not include 27 county normal training schools in Wisconsin, all of which teach agriculture.

⁴ Many of these are included in the 2,981 following.

AGRICULTURE IN COLLEGES AND NORMAL SCHOOLS.

Table 1 is a list of the State colleges of agriculture or of the institutions of which they are a part, which receive the benefit of the Federal "Land-Grant Act of 1862," the "Morrill Act" of 1890, and the "Nelson Amendment" of 1907. The number of students in four-year courses in agriculture is given; also the number of students in courses of less than four years where the work is of college grade; also the number of students in short subject courses of 1 to 12 weeks is given. The last-mentioned students as a rule confine themselves entirely to one particular branch of agriculture. The tabulation of land-grant institutions for negroes is given separately in Table 1(A).

Many of the State colleges of agriculture maintain secondary schools of agriculture; these are given later (see Table 9).

TABLE 1.—*State agricultural and mechanical colleges, 1915-16.*

Location.	Name of institution.	Students in 4-year college courses in agriculture.	Students in shorter courses in agriculture of college grade.	Students in subject-courses in agriculture of less than 12 weeks at institution.

Total.....		16,008	10,332	14,103

¹ Total enrollment of all winter courses, 1 month to 1 week.

Table 2 is a list of colleges, other than the State agricultural colleges, which reported students in courses in agriculture in their annual report to the Bureau of Education for the school year 1915-16. The total number of colleges teaching agriculture may be slightly greater than the number in this list, as reports were not received from all institutions. Colleges which state in their reports or in their catalogues that agricultural courses are offered, but which reported no students enrolled in the subject, are not included.

AGRICULTURE IN PRIVATE SECONDARY SCHOOLS AND IN SCHOOLS FOR NEGROES.

Table 4 is a list of private secondary schools reporting students in agriculture to the Bureau of Education during the school year 1915-16. Private special agricultural schools are given in Table 5. Institutions for negroes are not included in Table 4, but are given in Tables 6 and 7, which give, respectively, those teaching agriculture and those teaching gardening only. None of the institutions included in any of these tables (4, 5, 6, and 7) are public high schools. Public high schools teaching agriculture are given later.

AGRICULTURE IN INSTITUTIONS FOR JUVENILE DELINQUENTS.

Table 8 gives a list of public institutions for juvenile delinquents in which technical and practical agriculture is taught. There are many other institutions of this special class in which boys are required to work on the institution farms, but the work is not primarily educational.

In many State and county prisons, penitentiaries, and jails, farm work is required of the inmates. In a few of them definite instruction in agriculture is given through classroom work, lectures, etc. For instance, at the California State Prison at San Quentin, 318 inmates were enrolled and took agricultural courses through the extension division of the State agricultural college in January, 1917. Twenty-three different courses were given. Weekly meetings of the agricultural students were held, at which special lectures in agriculture were given. In the California State Prison at Folsom, 70 men have been enrolled in agricultural classes during the past year. The work is carried on under the general supervision of the State agricultural college, an instructor coming to the prison every Saturday.

In the State penitentiary at Columbus, Ohio, in February, 1917, 46 inmates were taking or had completed courses in poultry, swine, horses, truck gardening, etc., all through the extension service of the State university. In the State prison at Walla Walla, Wash., between 400 and 500 inmates work on the farm and receive instruction in the technical side of their work. In the State penitentiary at Lansing, Kans., 20 inmates are enrolled in an agricultural extension course organized by the State agricultural college. The plan has been followed for five years.

TABLE 8.—*Institutions for juvenile delinquents teaching agriculture.*

Location.	Name of institution.
California, Waterman.....	Preston School of Industry. ¹
Georgia, Augusta.....	Richmond County Reformatory.
Idaho, St. Anthony.....	Idaho Industrial Training School.

Wisconsin, Sparta.....	State Public School for Dependent and Neglected Children.
.....Waukesha.....	Wisconsin Industrial School for Boys. ¹

¹ No classroom instruction is given, but definite instruction in agricultural practices is given in the field in connection with practical farm work.

SECONDARY AGRICULTURAL SCHOOLS.

Table 9 is a list of the secondary schools of agriculture maintained by the State colleges of agriculture at the colleges. As noted in footnotes, the Colorado Agricultural College maintains an agricultural school at Fort Lewis, the Minnesota college one at Crookston, and one at Morris, and the Nebraska college one at Curtis. These are in addition to secondary schools of agriculture maintained at the institutions.

Twenty-four institutions are included in the list; of these, eleven maintain "schools of agriculture," usually under that special name. They are, however, taught in large part by members of the regular agricultural college faculty, and the college recitation rooms, lecture rooms, laboratories, and equipment are all used. There is little difference in the organization of these so-called "schools of agriculture" and in the "one-year," "two-year," "industrial," and "vocational" courses in agriculture in other colleges.

The data included in the table are taken from the official reports of the institutions required by act of Congress of the land-grant colleges receiving the benefits of the annual appropriations known as the Morrill and the Nelson funds.

¹ Maintains school of agriculture at Fort Lewis (see Table 10).² Instruction by the general faculty.³ Includes students in mechanic arts.⁴ Maintains schools of agriculture at Crookston and Morris (see Table 10).⁵ Maintains school of agriculture at Curtis (see Table 10).⁶ Includes students in agriculture, horticulture, mechanic arts, commercial subjects, home economics, and general science; both boys and girls.

Table 10 contains a list of special agricultural schools established by the various States or established by counties or other local units and supported in whole or in part by the State. Secondary agricultural schools maintained by the State colleges of agriculture on the agricultural college grounds are not included, but those mentioned by the colleges in other places are included. Data indicating the facilities for teaching and the enrollment are given.

In other States there are vocational agricultural departments or courses supported in whole or in part by special State aid maintained in connection with public high schools. A list of these is given in Tables 11 and 12, and many of them are given again in Table 15, among the public high schools. Those repeated are starred. Several other States, such as Arizona, Iowa, Kansas, and Nebraska, give special State aid to public high schools teaching special subjects, among which agriculture is included. No State supervision is given, however, and the agricultural instruction is largely for the purpose of imparting information about agriculture rather than preparing boys definitely and directly for farming. This is indicated in column 4, Table 15. The character of the work depends upon the local school authorities. The Michigan schools included do not receive special State aid; however, their agricultural courses are taught by graduates of the State agricultural college, who are (voluntarily) under the supervision of the professor of agricultural education of the college, and most of the instruction is vocational.

TABLE 11.—*State-aided vocational agricultural departments in public high schools.*

(Those starred are repeated in Table 10.)

AGRICULTURE IN PUBLIC HIGH SCHOOLS.

Each year the Bureau of Education sends forms of inquiry to all public high schools, asking for statistical information relative to them and their work. In the summer of 1916 they were asked to give the number of pupils in agricultural courses during the preceding year. The total number of high schools replying was 12,003. Of these, 2,981 reported pupils in agricultural courses, the number being 60,925, of whom 39,343 were boys and 21,582 girls. Table 13 gives the data by States and by divisions.

To each of the 2,981 schools reporting pupils in agriculture a special questionnaire was sent to secure data to determine the amount and character of the instruction in the subject. Replies were received from approximately 2,250. The amount and character of the agricultural instruction in some of these was so little that the schools are not included among those tabulated in this report; 2,166 were giving instruction in agriculture in a serious way. Table 14 is a summary of the data submitted by these 2,166 schools. Table 15 gives the name and location of each school and part of the data collected.

In the summary table (Table 14) the schools are listed in columns 3 to 6 in regard to the date of introduction of agriculture in the course of study. It is interesting to note that but 19, or less than 1 per cent of the 2,166 schools, taught agriculture in or before 1900, and that 33, or less than 1.5 per cent, introduced the subject between 1900 and 1905. In over 97.6 per cent of the schools agriculture was introduced since 1905, and in 78.5 per cent since 1910.

The schools were asked to indicate their primary purpose in teaching agriculture, that is, whether the agricultural course is given for vocational purposes as definite preparation for farming, for informational purposes as information about agriculture, or for general cultural purposes. The replies indicated very clearly that

a large number of the schools did not know the purpose of the course. Many of them reported they were teaching it for all three reasons, and many more for two reasons. In the table all are included as giving vocational courses that reported so, regardless of whether they reported that the course was informational or cultural as well. Those that reported their course to be primarily informational and those that reported it to be informational and cultural are included under informational. Under cultural are included those reporting their course to be cultural only. On this basis over 25 per cent of the 2,166 schools stated that their courses are vocational. This figure can be used as an indication of the opinion of the schools relative to the purpose of their agricultural courses, but can not be taken as an indication of the proportion of the schools whose work is actually vocational. A comparison of column 4 in Table 15 with columns 7, 8, and 9 shows that many schools report their work as vocational and report also that the method of instruction is limited to classroom recitation work. In practically all of these cases a textbook on agriculture is used and the method of instruction does not differ materially from the method of teaching geography. Others that report their work as vocational give some laboratory work in addition to classroom work, but they report no practical work either on school land or in the performance of home agricultural projects. Many schools stated on the blanks that no practical work was needed, as their pupils lived on farms. It indicates a lack of conception on the part of the school authorities of what agricultural education means.

A better idea of the actual amount of vocational instruction in agriculture may be obtained from columns 7, 8, and 9 of Table 15, and columns from 13 to 18, inclusive, in Table 14. The summary shows that 422, or practically 20 per cent, of the schools included in the table confine their instruction wholly to classroom recitation work; 50 per cent supplement the classroom work with laboratory experiments and in some cases with observation work on neighboring farms; while 676, or 30 per cent, combine classroom instruction with laboratory work and practical farm work either on school land or at the homes of the pupils through the project method; 337 of the 676 are using the home-project method, although in only 261 instances is the home project supervised by the agricultural instructor. As a matter of fact, there are many public high schools in the United States using the home-project method other than those included in the 2,166 that reported. All of the State-aided schools in Massachusetts, New York, Pennsylvania, New Jersey, and Louisiana use this method. Less than 50 per cent of them reported and are contained in Table 15. The total number using the home-project method in the United States must be at least 450.

The number of schools reporting school land used in connection with instruction in agriculture is much less than the total number reporting practical work. This is due, of course, to the large number of schools using the home-project method and therefore not needing school land.

The efficiency of the instruction depends in large measure upon the special training of the instructor in agriculture. The number of persons teaching agriculture in the 2,166 schools included in the table who are graduates of agricultural colleges is only 15 per cent of the total; an additional 21 per cent have had some training in agriculture in institutions of higher education, including both colleges and normal schools. This number includes those with only one summer term in agriculture, those with a winter "short course," and those with one, two, or three years of regular college courses in agriculture. If replies had been obtained from all teachers of agriculture in public high schools, the per cent with training in agricultural colleges would probably be a little higher, since practically all of the State-aided agricultural departments in Massachusetts, New York, Pennsylvania, New Jersey, and Louisiana, and the schools listed in Table 12, employ as instructors in agriculture only graduates of agricultural colleges.

In the first paragraph of this section mention is made of 2,981 public high schools reporting pupils in agriculture in 1915-16. As stated, Table 15 includes 2,166 of these, all that reported on the special questionnaire. The name and location of the 815 not replying are given in Table 16, together with the names of other high schools reporting pupils in 1914-15. See page 83.
